# PROJECT REPORT

**Name: Aditya kushwah**

**Register Number: 25MIM10223**

**Branch: Int.Mtech(AI)**

**Year: First Year**

**Course Code: CSE0001**

**Date: (31-03-26)**

## Introduction

This project is based on developing digital literacy skills, which are essential for students in today's technology-driven world. As a Student Digital Ambassador, the objective of this project is to create awareness about digital tools, online safety, and professional communication. The project includes tasks such as creating an infographic, building an online portfolio, exploring coding platforms, understanding email etiquette, and studying cybercrime awareness. These activities help in improving technical knowledge, communication skills, and responsible online behavior. Overall, this project provides practical experience in using digital platforms effectively and prepares students for academic and professional growth.

### Task 1: Infographic

In this task, I created a digital literacy awareness infographic using Canva. The infographic highlights important topics such as the meaning of digital literacy, useful digital tools for students, and safe internet practices. I designed the infographic in a simple and visually appealing format using icons, colors, and short bullet points to make it easy to understand. The goal was to spread awareness among students about how to use digital tools effectively and responsibly. While creating the design, I found it interesting to explore different templates and layouts. One challenge I faced was selecting the right amount of content so that the infographic remains clear and not overcrowded. Overall, this task helped me improve my creativity and presentation skills.

### Task 2: Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. GitHub is a platform used to store and manage coding projects, and I created a profile along with a README file to introduce myself. LinkedIn is a professional networking platform where I added my education details and basic profile information. Kaggle is a platform for data science and coding practice, where I created an account to explore learning opportunities. These platforms are useful for building a strong digital presence and showcasing skills. In the future, I plan to upload my projects on GitHub, connect with professionals on LinkedIn, and practice coding problems on Kaggle. This task helped me understand the importance of maintaining a professional online identity.

- Task-3: portfolio

- In this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level coding problem. This helped me understand basic problem-solving and programming logic. Additionally, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions, including multiple-choice and short-answer questions. I also viewed the responses in Google Sheets, which showed how data can be collected and analyzed. These tools are very useful for academic purposes, such as conducting quizzes, surveys, and coding practice. This task improved my understanding of online platforms and how they can be used for learning and collaboration.
-
- Task 4: Email Etiquette

- In this task, I learned about the importance of professional communication through emails and social media. I wrote two formal emails—one requesting an assignment extension and another expressing interest in an internship opportunity. I also created a checklist of Do's and Don'ts for responsible social media use. A situation of poor communication can occur when a student sends an email without a proper subject or uses informal language, which may create a negative impression. This can be avoided by using a clear subject line, polite tone, and proper structure. This task helped me understand how important communication skills are in academic and professional environments.

## Task 5: Cybercrime Awareness

- In this task, I studied cybercrime awareness and created a case study on online fraud. I learned how cybercrimes such as phishing and UPI fraud occur and how they target users. I also prepared a checklist of preventive measures to stay safe online, including using strong passwords, avoiding suspicious links, and verifying payment requests. One surprising aspect was how easily people can be tricked into sharing sensitive information. As a result, I will be more careful while using online platforms and avoid sharing personal details. This task increased my awareness about online security and responsible digital behavior.

- Conclusion : This project helped me gain valuable knowledge about digital literacy and its importance in everyday life. I learned how to use different online platforms, create a professional digital presence, communicate effectively, and stay safe from cyber threats. The tasks were practical and improved my technical and communication skills. Overall, this project was a great learning experience and will help me in my academic and professional journey
